

Routing Scenario Report

Generated: 2026-04-22 18:28:06

Network source: Random

Scenario failures: {'down_nodes': [], 'down_edges': [], 'packet_loss_nodes': {}, 'packet_loss_edges': {}, 'maintenance_edges': {}}

Comparison mode:

- Dijkstra: PDR 38%, latency 202.33, throughput 7.83
- Bellman-Ford: PDR 42%, latency 168.48, throughput 6.09
- ACO: PDR 35%, latency 96.31, throughput 10.56
- GA: PDR 40%, latency 280.41, throughput 4.96

Recommendations:

- [HIGH] Default to Bellman-Ford for this scenario: It delivered the highest composite score (0.6395) for the current topology, traffic, and failure profile.
- [MEDIUM] Avoid ACO for stressed conditions: It was the weakest option in this run with packet delivery ratio 35%.
